

Documentation for Talend Data Integration

- In order to combine the datasets we have to drag two “tFileInputDelimited” node and connect both of them with the TMAP Node.
- After both of them are connected we have to map the varriables from source to destination and also have to specity the relation between Customer ID that are in both of the CSV.

- Once mappings are finished we can save the data using “tFileOutputDelimited” and need to specify the location of where the file is gonna be saved.

tFileOutputDelimited_1
